PrintServer

Enhances your ERP system.

Unifaun PrintServer.

- Unifaun PrintServer is our most complete system for everyone who wants to meet requirements from a variety of carriers without having to make continuous and costly changes to their business system.
- Unifaun PrintServer has the capacity to process large volumes of information for EDI and freight documents quickly, but does not require a great deal of computer capacity – or special attention.
- Unifaun PrintServer is the software that allows you to keep working in your standard business system when generating freight documents. As such, it is ideal for everyone with significant or comprehensive flows of parcels and/or goods, and who may have to deal with multiple parcel areas and printers in a complex storage environment.
- Together with Unifaun Online Control, the solution provides complete and immediate control of all your dispatches. With Unifaun Online Control, you can monitor the EDI transfer and easily track your dispatches – no matter which carrier(s) you may have engaged.
- Of course, you also get all services included in the Unifaun Online Standard or Plus solutions.

Today Unifaun PrintServer is used in over 2000 installations with more than 70 different ERP systems, ranging from Visma Administration to SAP R / 3. In addition, we have over 50 customized integrations.

The system supports most of the carriers operating in the Nordic market and always creates compliant labels and documents and sends EDI under the carriers' requirements.

EDI interchange agreement and Unifaun Online Control.

Unifaun PrintServer is always offered together with the EDI interchange agreements and Unifaun Online Control. With the EDI interchange agreement, you can be sure that your carriers are informed in accordance with their requirements.

Unifaun Online Control gives you and your colleagues full and immediate control over all shipments. You get access to services such as shipment lists, check lists, tracking and e-mail notification. Unifaun Online Control also allows you to print shipping labels, and in some cases book pickup out of the normal order flow. Read more about the Unifaun Online Control services on our website.

Functionality - Unifaun PrintServer.

This may be included in your Unifaun PrintServer solution:

Unifaun PrintServer

Configuration and deployment.

Unifaun or any of our partners is usually involved in implementing the system, from concept to deployment. We coordinate the contacts with your business system supplier to ensure a comprehensive solution that makes operations more efficient.

How to get started.

Contact Unifaun to get a detailed description of how Unifaun PrintServer can be customized to your way of working, your transportation needs and goods flow, your business system and your environment.

Support & Updates.

Reliability is Unifaun PrintServer's perhaps most important characteristic. A support and update agreements is always included when you order your system.

We can also offer you an extended support contract tailored to your needs.

Unifaun PrintServer is updated regularly. Carriers launch new services, and some services change or disappear. We also tune the system continuously and enhance it with new features.

Your update agreement gives you access to the latest version of Unifaun PrintServer, ensuring that you always produce the EDI and the documents necessary for your shipments - at a predictable cost.

Documentation.

Go to Unifaun Online's help pages for user guides, specifications, downloads, sample files, etc.

Questions and Answers.

Check whether your question has already been answered in our forum. In the forum, you can discuss and find answers to questions about all aspects of Unifaun products, carriers, labels, SIS and CMR freight notes, printers, customs documents and other transport and carrier issues.

Unifaun Support.

Unifaun also offer personal support from our support team working closely with product development, account managers and our partners. In most cases we solve the problem directly in touch with you. Central errors are fixed immediately, day or night. Serious functionality problems are sought and acted upon the same day and minor errors are corrected as soon as possible daytime.
